Discussing the contribution of geospatial technologies in enabling, achieving and monitoring better performance in sustainability. Presenting relevant policies, innovations, (im)possibilities and tools. Taking position in developments, barriers, opportunities and the role of various stakeholders.
CAPIGI is the network for geospatial experts active in agriculture. A state-of-the-art overview on innovations and research in geo-information applications will be presented. CAPIGI 2018 brings the latest advancements on Food Security, Greening, Climate Change, Agricultural Policies and Precision Farming. CAPIGI discusses how agriculture can benefit from Earth Observation, Satellite Navigation, Internet of Things, Sensors, Robotics, Drones, and Big Data. How does this bring farming practices and agricultural policies to a next level? How does this affect existing business models?

CAPIGI 2018 is the perfect place to share, learn, network, connect and create.

FOR WHOM IS CAPIGI?

GOVERNMENT | INDUSTRY | RESEARCH | SECTOR | STUDENTS
